Summary

Senior Java Backend Engineer with 15+ years of experience in telecom, streaming media and retail. I modernize existing Java systems while delivering new features, including upgrades from Java 6 to Java 21 and Spring Boot. Since 2021, I have combined hands-on development with Team Lead and Tech Lead responsibilities.

Technical Skills

- Backend: Java 8–21, Spring Boot, REST APIs, SOAP, gRPC
- Systems: distributed systems, integrations, authorization, API gateways, legacy modernization
- Messaging: NSQ, Apache Kafka
- Data: PostgreSQL, Oracle, SQL tuning, JPA/Hibernate, Liquibase
- Delivery: GitLab CI/CD, Docker, Docker Swarm, Linux, Nginx
- Testing and monitoring: Testcontainers, Spring Boot Actuator, Prometheus, Grafana, Micrometer

Work Experience

Restream Media (Wink) 2016 – Present
Senior Java Developer (2016–2021) → Team Lead / Tech Lead (since 2021) Moscow, Russia (remote since 2022)

Selected work across both roles:

- Responsible for subscription, purchase and integration services for Wink, a streaming platform with about 10 million monthly users. Each regional deployment handled about 300 requests per second and stored about 2 TB of data.
- Added new purchase and subscription options and improved integrations. Moved B2B features into a separate project.
- Designed and built authorization and API gateway services for the core product.
- Upgraded backend systems from Java 6 to Java 21 and Spring Boot 3.5 in stages, while continuing to deliver product features.
- Replaced manual Oracle database scripts with versioned Liquibase migrations, including validation and rollback support. Improved the data access layer.
- Reduced execution times for slow Oracle queries. Analyzed execution plans and database statistics, added indexes, applied optimizer hints and SQL profiles, and tuned the database.
- Improved NSQ messaging with typed messages, deduplication and a persistent outbox.
- Added Spring Boot Actuator, Prometheus and Micrometer metrics, readiness checks and request tracing. Added integration tests using Oracle Testcontainers.
- Led technical work for a team of five engineers. Interviewed about 20 candidates and hired five engineers.

Senior Java Developer 2013 – 2016
AT Consulting Moscow, Russia

- Built a discount calculation engine and service APIs for retail products.
- Built services to calculate business KPIs for telecom systems.
- Developed features for contact center knowledge management systems.

Software Developer 2008 – 2013
Icicall / Intellectika / AuditNT Moscow, Russia

Education

Specialist Degree (5-year program) in Applied Mathematics and Computer Science
Southern Federal University (former Rostov State University), 2003 – 2008

Languages

English, Russian, French (basic)
